Persistent Cross-Site Scripting Attack
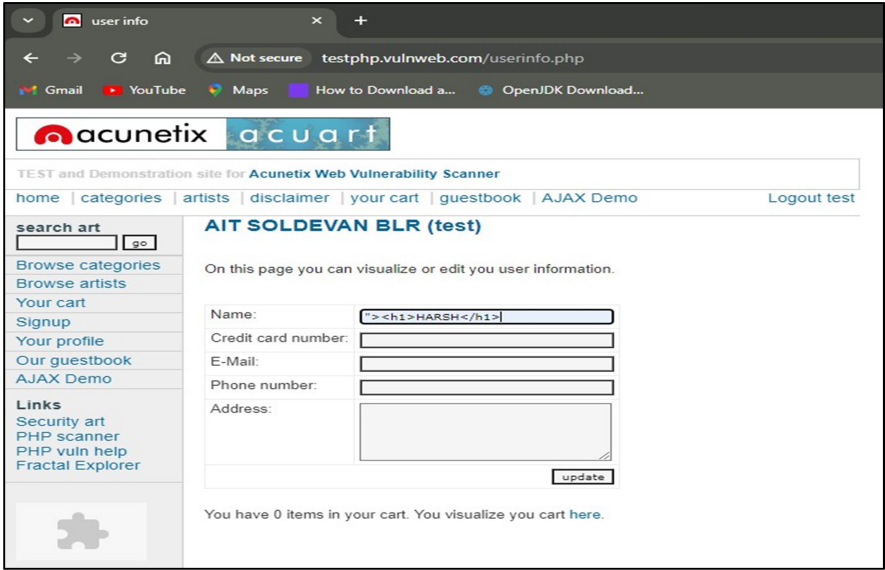

Cross-Site Scripting Attack using testphp.vulnweb.com

Open website go to the inspect copy the input filed end tag paste into in name section and add our script

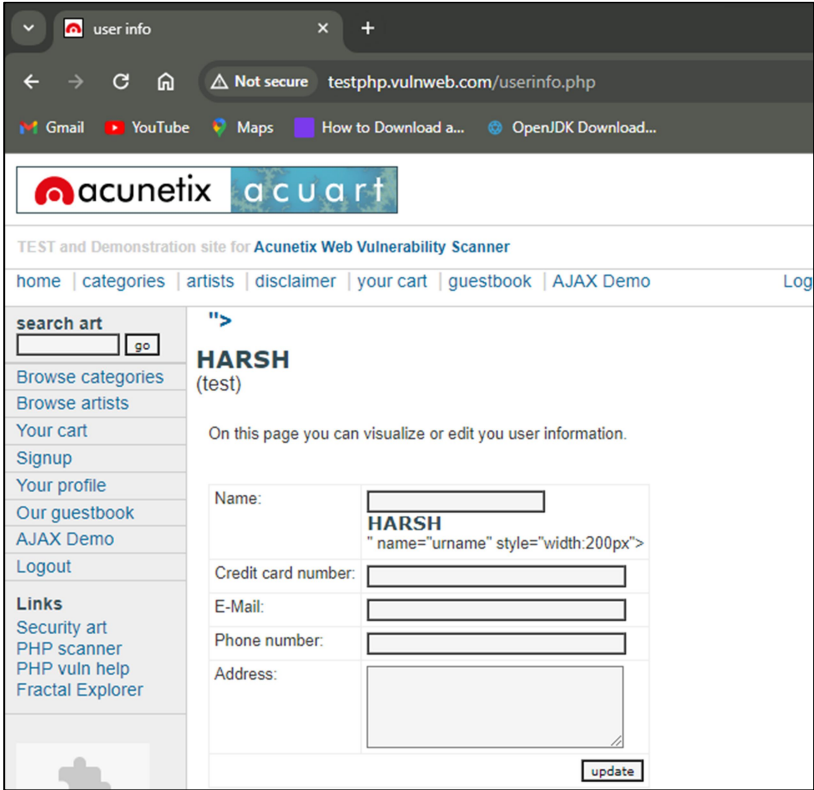

Whenever we click on update it will give us alert message

We can add html tag also here I can use the h1 tag and give name
In this case when we click on the update button it will give me the test HARSH
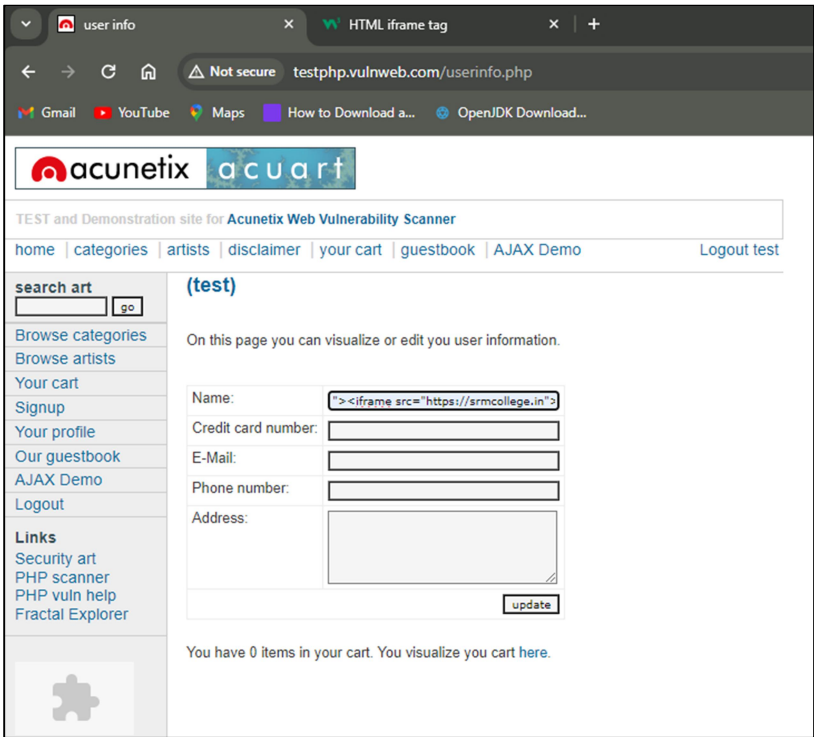

After click on update button
Output

We can open another window in another website using iframe

So here we can open our college website in testphp.vulnweb.com
Within the iframe tag we are give to the path of our college website using src attributes

Now we can see in url open testphp.vulnweb.com website but with in that website we can seen our college website
